

Yasuyuki SAKAI is a professor at Department of Chemical System Engineering and co-appointed professor at Department of Bioengineering, University of Tokyo. He received Ph. D. Department of Chemical Engineering, University of Tokyo, Japan. His current research topics are development of microphysiological systems (MPS), engineering of implantable 3D tissues/organs, and large-scale culture of stem cells. He has been placing particular importance on realization of good mass transfers and 3D organization of cells in vitro. During his research career, he published over 250 original publications. He got several scientific awards such as young investigator award of Society of Chemical Engineers, Japan, publication awards of Society for Bioscience and Bioengineering, Japan and Japanese Society for Alternatives to Animal Experiments (JSAAE). He became a fellow of American Institute for Medical and Biological Engineering (AIMBE) from 2012 for his outstanding contributions to tissue engineering and cell-based assays. He is a guest professor at Technological University of Compiègne, France from 2019. He is also a fellow of Society for Chemical Engineers, Japan, from 2021 and a member of the Engineering Academy of Japan from 2022. He is working as an editorial board member of Biofabrication, Bio-Design and Manufacturing (BDM) and Frontiers in Toxicology (in vitro toxicology), and Health Engineering.
